**C-JOB**

DEDICATED NAVAL ARCHITECTS

## **PRESS RELEASE – FOR IMMEDIATE RELEASE**

### **A Strategic Partnership for Glosten and C-Job**

**SEATTLE, WA (USA) – 16 November 2018** – Two leading naval architecture firms, Glosten and C-Job Naval Architects, announce a strategic partnership to create more value for their respective clients. Executives from the two firms met recently at Glosten’s newly opened East Coast office to sign a Memorandum of Understanding (MOU) defining the firms’ shared goals and objectives.

“This is an important step in formalizing what has already been a fruitful relationship over the past several months,” said Glosten President Morgan Fanberg, PE. “It is encouraging to see the work we can accomplish together. We look forward to offering these complementary skills to our industry partners around the globe.”

This multinational partnership will deliver optimized technical teams with increased value across a wide range of ship designs including research vessels, offshore energy service vessels, and dredging vessels.

Basjan Faber, CEO of C-Job, shared his enthusiasm for the new partnership. “We’ve been looking to expand our operations and follow our American Dream. We’re excited to have found a partner in Glosten – well known in the American maritime industry, who share the same vision and values as C-Job. We look forward to what our joint future will bring.”

C-Job’s track record in the Offshore Wind market, combined with Glosten’s experience in US ocean renewables, will bring added value to the emerging Offshore Wind market.

The companies’ combined track record and suite of services are complementary, focusing on areas such as naval architecture, marine engineering, structural engineering, electrical engineering, marine construction design, sustainable propulsion, numerical modelling, interior design, detail/production design, noise control engineering, and construction supervision.

**Glosten** is recognized throughout the marine industry for providing innovative solutions to clients’ challenging problems by integrating advanced analysis with practical, experience-based design. Glosten has 60 years of experience in designing specialized vessels and floating structures for a wide range of Owner-specified missions. Find out more at [www.glosten.com](http://www.glosten.com).

**C-Job Naval Architects** is the largest independent ship design and engineering company in the Netherlands. The company employs over 140 in-house maritime engineers and naval architects across four offices. C-Job has extensive experience in providing independent, challenging and multidisciplinary ship design and engineering solutions. The company's track record includes projects for Offshore, Dredging, Passenger Vessels and Yachts from Concept through to Detail Design and Building Supervision.
